

About us

EF Polymer is an Agritech company that has created a revolutionary product called "Fasal Amrit," which means "Elixir for Plants." This 100% biodegradable super absorbent polymer is made from nutrient-rich fruit peel waste and is completely organic. It took seven years of research in India and Japan to develop this product.

Fasal Amrit has the remarkable ability to absorb water up to 100 times its volume. When mixed with soil, it works wonders by reducing water requirements, increasing crop yield, lowering plant mortality, improving soil porosity, enriching soil with natural nutrients, and reducing fertilizer usage. This product is a game-changer in the field of agriculture and has the potential to revolutionize the way we grow crops/plants.

Benefits

100% Soil Improvement

40% Water Saving

20% Reduce in Fertilizers

30% Increase in crop yield

25% Growth in income

Approved by

TATA TRUSTS

Without Fasal Amrit

With Fasal Amrit

Recommended by ICAR - IIMR

“ Using organic Fasal Amrit at the rate of 15-20 kg/ha is beneficial for increasing the yield and net return of kharif maize in northern hill region (Zone I) and mid- western region ”
