

Graft Single

The Graft Single applies proven grafting technology from fully automated systems into a low-entry, accessible solution. By reusing proven grafting principles in a simplified, modular design, it brings high-tech grafting within reach for nurseries of all sizes.

Graft Single

The Graft Single is a semi-automatic grafting machine designed for young vegetable plants.

The Graft Single is designed to make automated grafting accessible to a wider range of nurseries. Delivering up to 1,000 grafts per hour, it offers consistent performance, ease of use, and reliable quality in one practical solution.

As a low-entry system, the Graft Single is ideal for nurseries seeking the benefits of automation without the complexity and investment of fully automated grafting lines. The

machine ensures identical cutting angles for both rootstock and scion and offers the flexibility to cut straight or angled, depending on crop requirements. Compatible with all stable plug types and designed for simple operation and maintenance, the Graft Single offers an efficient and dependable solution for young vegetable plant grafting.
